

MLS Data Import Integration

Stop retyping MLS Data

Click**FORMS**™

**HASSLE-FREE
APPRAISAL
SOFTWARE™**

If your MLS is a good source of data, you're probably retyping more than ten fields of data for every listing you use. This is time consuming, energy draining and a waste of your time. It's time to get a direct connection between your MLS and ClickFORMS. This tool allows you to import your MLS property data directly into ClickFORMS in a few simple clicks — no more retyping!

How it works

- 1** Export Data from your MLS provider in one of the following formats (txt, csv, pipe)
- 2** Import the file into the MLS Data import wizard
- 3** Create the custom map file by matching the export fields in your MLS to the Available ClickFORMS Cells
- 4** Select where to export your data (Subject, Comps, Listings)
- 5** Click Import and your data is now populated in the grid

Next time simply open the wizard and select the saved map file, click next and import. Your comps grid is filled out in under 1 minute. OR you can create another custom map file if you need different format. Create as many map files as you need for as many MLS systems that you work with.

Save time!

New Quick and accurate MLS integration

- No More Copy & Paste or retyping of Data
- Fill in your comps grid in minutes
- No transposing of data
- Reduce errors with auto import
- Work with Multiple MLS services? Create as many data maps as you like

We will provide documentation you need to get started.

FREE Online ClickFORMS Training!

If you need assistance in setting up your MLS export file and ClickFORMS Map, a Bradford MLS Specialist can log into your pc and assist in creating these files. There is a \$49 fee for this custom service. any additional updates/changes will also incur an additional charge after the mapping file is created and signed off on. Please contact your sales rep to schedule this service.

"Like everyone, I'm in a hurry and I'm sure you know how hard it is to catch errors when (and if) you proof. Using ClickFORMS MLS integration assures the transferred data from MLS will at least be accurate. Innocent typos can easily skew values and wrong values create complaints and law suits... you get the idea."
