Some Things are Just Better Together

Redstone's Advanced Analytics Data Now Transfers to ClickFORMS

ClickFORMS users can now quickly transfer data from their Redstone file directly into their ClickFORMS report. Plus, it will automatically be converted to UAD format. It's fast. It's easy. It's hassle-free.

Add a Redstone Addendum for a Higher Caliber Report - Now Do It Faster!

Appraisers have been using Redstone to analytically support their adjustments and comparables to address new challenges and demands. Now Redstone transfers data to ClickFORMS to speed up the process of completing your report while adding the transparency and methodologies needed to produce a higher caliber report. Redstone transfers the following data in UAD format and imports a Redstone addendum with completed 1004MC to your report: Redstone will now transfer data to your ClickFORMS report – In UAD format!

Data*

- Subject Data
 General Description
- One Unit Housing Age and Price Ranges

All the Benefits of a Redstone Analysis and Complete a Report Faster Than Ever

Redstone's new copy/paste function for ClickFORMS brings in data from Redstone, including MLS and 1004MC data with a single import function quickly and efficiently. No more wasted time re-typing or fixing errors. Plus, you get all the benefits of a Redstone analysis that can avoid costly call backs from reviewers. Regression analysis for adjustment support and analytically supported comparables can convey the methodologies you used in your analysis so the reviewers know what you're thinking and don't have to call for clarification. Save time completing your appraisal report and save time not responding to reviewer questions after you've submitted your appraisal.

^{*} Data imported from your MLS and public records

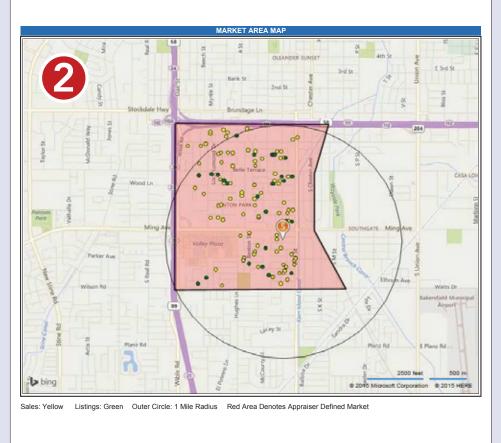

Redstone Market Area Summary

Demonstrate your local knowledge and expertise of the market to the reviewer and borrower with the Redstone Market Area Summary addendum. This addendum summarizes the market area statistics; the major characteristic ranges for both the sales and listings in the market; the location of these properties relative to the subject; plus a graphical representation of the actual market area used in the analysis.

Market Area Statistics

The total number of sales and listings is clearly stated along with the ranges for the major characteristics of these properties such as sales prices, room counts, GLA, etc. It is important for the reviewer to know that you considered all available sales and listings in the market area.

Market Area Map

This map is a comprehensive display of the properties analyzed that directly reflects the in-depth analysis performed on this appraisal. The street map shows the location of the subject and the all the sales (shown in yellow) and listings (shown in green). Market area boundaries are defined by the polygon, further demonstrating your expertise and geographic competence of the area. The traditional one mile radius circle around the subject is drawn to show its relationship and scale to the appraiser defined market.

Redstone Sales Comparable Selection

Show the reviewer and borrower the analytical process that was used to select the comparables by adding the Redstone Comparable Sales Selection Methodology addendum to your report. In today's environment, it's vitally important for the reviewer to know the methodology that you used to sort the highest ranking group of properties from which you selected your final comparables. This level of transparency is unprecedented in residential appraising and can reduce needless call backs.

Comparable Sales Selection Methodology Borrower James Conrad Property Address 1 Main Street City Bakersfield County KERN State CA Zip Code 93304

The initial selection of the comparables was performed analytically using a rating system based on the specified property characteristics, the weight assigned to each characteristic by the appraiser and the filtering specifications also set by the appraiser as shown below. The final selection of comparables utilized in the analysis was determined by the appraiser and is based on the appraiser's experience and knowledge of the local market and of the properties under consideration. Weighting factors range from 1 to 10, with 10 conveying the most important factor.

CHARACTERISTICS COMPARED	WEIGHT
Proximity	10
Date of Sales	10

Characteristics Compared

This table lists the property characteristics that you compared along with the weight you placed on each characteristic in the selection process.

2 Filtering

This table lists the filters that you used to fine-tune the sales in the market area to a set of competing properties that could be considered legitimate comparables to the subject property.

3 Top 20 Sales Comparables

This table shows the top 20 sales, filtered and ranked according to the specified characteristics and their weight. In the far left column, your final selections are indicated by numbers 1-6. In the far right column are short statements that inform the reviewer and borrower why you chose (or did not choose) a particular property as a comparable. This table of 20 properties corresponds with the list provided to lenders by Collateral Underwriter, further supporting your selection and countering discrepancies between the two lists.

4 Aerial View

This image shows the location of the subject and the selected comparables. The aerial view shows the reviewer that the comparables were selected with similar characteristics. This visually demonstrates that the most appropriate properties were chosen to be the comparables used in the Sales Comparison Approach.

Redstone Market Adjustment Factors

Add the Redstone Market Adjustments addendum to your report and demonstrate to the reviewer and borrower that the adjustments you used in your appraisal were derived from a rigorous analysis of the market.

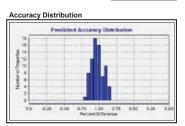

Market Adjustment Factors File No. Redstone Sample Case No. Borrower James Conrad Property Address 1 Main St City Bakersfield County KERN State CA Zip Code 93304 Lender/Client Bank Address 10 Oak Drive, San Jose, CA 95138

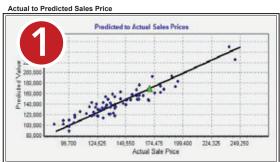

A regression analysis was performed on the properties within the subject's market. A summary of the analysis is described below along with the property characteristics that were determined to be statistically significant in this market. The final determination of the adjustment factors used in the Sales Comparison Approach were based on the results of the regression analysis, the significant market characteristics and the appraiser's experience and knowledge of the local market.

Regression Analysis Results

of Properties (Sample Size): 76

R Squared: 83.81%
Standard Error: 8.89%

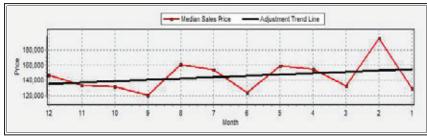

The R-Squared value of 83.81% indicates that 84 percent of the variation between sale prices in the market can be explained by the regression model. In general, the higher the R-squared, the better the model fits the data. Property characteristics with a P-Value of less than 0.05 were considered to have a statistically significant influence on value. Following are the significant property characteristics.

	ADJUSTMEN	IT FACTOR	S BY REGE	RESSION A	ANALYSIS

Regression Analysis Charts

The regression Scatter and Accuracy charts visually indicate to the underwriter and borrower how well the regression analysis worked. The values for the sample size, R Squared and Standard Error reinforce this visual presentation of the analysis.

2 Regression Market Analysis

This table lists the property characteristics that regression analysis indicated were statistically significant contributors to value. These are the characteristics that you should make adjustments on. The regression analysis will evaluate these characteristics:

- Gross Living Area
- Number of Bathrooms
- Site Area
- Garage
- Carport
- Basement Area
- Basement Finished Area
- Year Built
- Number of Fireplaces
- Pool
- Spa
- · Date of Sale

3 Time Adjustment Factor

There are four methods of estimating the Time Adjustment factor in Redstone. Adjustments can be estimated using monthly differences of the median sales prices; the estimate from regression; a least squares trend analysis; and the appraisers estimate.

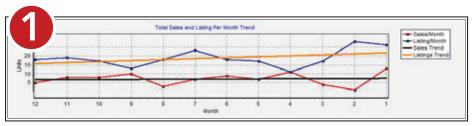

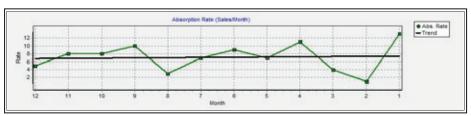

Redstone Market Trends Charts

Show the reviewer and the borrower that you've analyzed the entire market by adding Redstone's informative Market Trends addendum. The data for each month is plotted over a 12 month period (as of the Effective Date) and you have the option to show a 12 month, 6 month or 3 month trend line. Make comments on the trends charts to provide even more insight and convey your local market expertise.

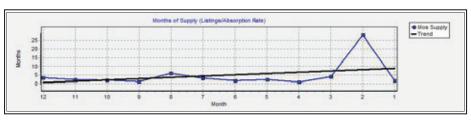

REDSTONE Market Trends File No. Redstone Sample Case No. Borrower James Conrad Property Address 1 Main Street KERN State Zip Code Bakersfield County 93304 San Jose, CA 95138

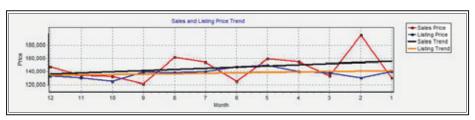

Although the overall sales trend is showing 12 months of stability, the fluctuations of the actual sales per month are depicted. The overall listing trend is showing a gradual increase in number of homes on the market, the monthly actuals give market activity

The annual Absorption rate trend appears virtually stable, while the monthly rate shows normal fluctuation

Looking at the sales and listings Absorption rates, one would notice the trends appear inverse

The annual sales price to list price ratio for the year appears to be at a gradual increase and suggests a seller's market. The monthly trends show aside from an abnormal month 2, the overall ratio appears to be somewhat stable. Overall: Months 12-10 show stability in all graphs. Months 9-7 show a decline in month 9, increasing in month 8 and levelling by month 7. Months 6-4 show an abundance of inventory in month 6 and declining market, to an increasing market in month 5 and stable market in month 4. Months 3-0 show an increasing market in months 3 and 2, the sales appear to have leveled by month 1 the supply of homes have dropped dramatically.

Redstone 1004 MC Addendum

Let Redstone automatically generate your 1004MC report. You'll save a substantial amount of time by not manually filling in the 1004MC form. You'll also avoid any transpositional errors in the 1004MC or in your Comp Grid* by letting Redstone automatically complete the addendum.

Save time and money by becoming more efficient and accurate with the creation of your appraisal report. The automatically generated Redstone 1004 MC addendum will help streamline the creation of this standard addendum while adding important analytics that produce a stronger and more transparent appraisal.

^{*} Importing of Comp and Listings Price Ranges to the top of the Comp Grid available only to ClickFORMS customers

Analytically Support Your Adjustments and Comparables Avoid Costly Call Backs

Appraisers are being tasked with providing even greater detail and analytical support for their adjustments and comparable selection. Your local market experience and knowledge are invaluable to providing a thorough analysis, but lenders are demanding greater transparency and repeatable results using accepted methodologies — Redstone™ was developed specifically to address these challenges.

Regression Analysis is at the Heart of Redstone

An accepted methodology for calculating your adjustments is Regression Analysis. It's the same methodology employed by most AVM's in calculating adjustments and values. Redstone's regression tool is intuitive and the appraiser is in control — this is not an AVM that is simply digesting your data. Redstone will also analytically support your comparables selection with three ranking scores that are prioritized by the appraiser to provide a final comp selection ranking that's repeatable and transparent.

Add a Redstone Addendum for a Higher Caliber Report

Appraisers are categorized by the quality of their work and this directly affects their level of compensation. Redstone's advanced analytics and detailed addendum will provide the transparency and recognized methodologies that reviewers are looking for in a quality report. Unsupported adjustments are the fast track to censure and while your market experience may be accurate, it's not accepted as evidence to support an adjustment. Redstone gives you the power to analyze market data and combined with your market expertise, it helps support and defend your appraisal. The result is a stronger and more transparent appraisal and fewer call backs from reviewers.

Try Redstone Appraisal Analytics Special 10 Analyses for \$10

This is a great starter pack to see if Redstone is right for you. After you have tried the sample properties that are built into the application, try Redstone in your local market with your local data. This discount will give you 10 analyses to try Redstone with data you know and will be using in your reports. You can purchase when you sign up, directly from the AppraisalWorld store or call your sales representative at 800-622-8727.
